Winter Internship Program

MCA

with focus on Backend Technologies

About MCA

Founded in 2008, MCA is a company built upon the passion and dedication to make our client's projects and visions come to life by utilizing the latest technologies.

Our main clients are American, Danish, Swedish, Swiss and Norwegian companies. Servicing the telecom, financial and law enforcement industries, MCA is involved in all phases of the development process – from inception, implementation to maintenance. Our customers appreciate our one-stop-shop approach, as we provide them with front-end, back-end, mobile and server operations.

We offer

At MCA you will work with a team implementing new features and tasks that are part of a large production system. In the course of daily work, you'll be challenged to produce the best solution possible, with stringent code review from the team and static analyzers bots. Compulsory daily peer reviews, fully tested code, and continuous delivery is what makes our developers code better. To master new technologies, we have weekly workshop sessions where the teams rapidly gain knowledge and experience.

And it's not only work, we have parties every week with drinks, foosball, video games…

Your qualifications

We're looking for passionate developers that have general experience in any Object-Oriented Programing Language such as C#, Java, TypeScript. It's a benefit if you have SQL, React or Angular experience. Your primary task would be to develop new modules and components for an extensive system.

Interns and Junior Developers

We completely understand that it's not possible for you to be fully productive without an extensive working experience. For that reason, we have an immersive introductory method that gets all applicants into full gear after two weeks. This is possible because we give you tasks from the current sprint, which must get on production this week. As such your teammates will assist you get your task done since their performance depends on it.

Apply
