

Internship/Job for Mobile Developers

About MCA

Founded in 2008, MCA is a digital product studio that delivers turn-key solutions to clients in Scandinavia, the USA, Switzerland. Our 110+ engineers have vast domain experience in the telecom and fintech industries where we have projects that usually last more than 10 years. At MCA we build better, not more!

We offer

At MCA you will work with a team implementing new features and tasks that are part of a large production system. In the course of daily work, you'll be challenged to produce the best solution possible, with stringent code review from the team and static analyzers bots. Compulsory daily peer reviews, fully tested code, and continuous delivery is what makes our developers' code better. To master new technologies, we have weekly workshop sessions where the teams rapidly gain knowledge and experience.

And it's not only work, but we also have parties every week with drinks, football, video games...

Your qualifications

We are looking for a highly motivated mobile engineering intern to create exceptional user experiences for our users. You will need strong software engineering skills, excellent interpersonal communication, and collaboration with our top-notch team of developers. Our goal is to set the bar for what mobile user experience can be. We want to work with people who are excited by this goal and have the talent to deliver on it.

- Design, code, and maintain mobile user experiences
- Optimize code for performance, stability and maintainability
- Work within a team of Software, iOS and Android engineers

Interns and Junior Developers

We completely understand that it's not possible for you to be fully productive without extensive working experience. For that reason, we have an immersive introductory method that gets all applicants into full gear after two weeks. This is possible because we give you tasks from the current sprint, which must be in production the same week. As such your teammates will assist you to get your task done since their performance depends on it.

Apply
