

QA Engineer/Software Engineer - Software Test Automation

Company Overview:

Allocate Software is the leading supplier of workforce and business optimisation solutions for organisations with large multi-skilled workforces. The company produces packaged resource management and analysis software products for the Healthcare, Defence and Maritime sectors. The company has its head office in London, UK with other major offices in Sweden and Australia.

Allocate Software has experienced sustained growth for many years, with clients in the Europe, Australia, USA and other overseas territories. To support ambitious growth plans, the company is now establishing a software development centre in Skopje and is seeking a number of people to form a new Software Test Automation team.

The successful applicants will have the opportunity to work on market leading, modern .net application products used in the Healthcare market in Sweden, where initial training will be provided.

It is important that candidates have excellent written and verbal communication skills in English, are enthusiastic, thorough, self-motivated, collaborative team players, show respect for others and take responsibility for the quality and timeliness of their work. Experience of SCRUM is also useful.

Responsibilities

Build supporting framework functionality for execution and verification of test data and custom made test applications when needed.

Add audit functionality to existing applications when needed for verification for the automated tests.

Implementing test automation from test case specifications.

Manage and structure test scripts.

Participate in sprint planning activities and commit to sprint backlog when user stories are well understood and have reasonable estimations of effort.

Close collaboration and good communication with the Product Owner/Test Leader and the rest of the development team.

Participate in effort estimation for implementation of automated tests.

Qualification Requirements
