

Senior QA Engineer

Company Overview:

Allocate Software is the leading supplier of workforce and business optimisation solutions for organisations with large multi-skilled workforces. The company produces packaged resource management and analysis software products for the Healthcare, Defence and Maritime sectors. The company has its head office in London, UK with other major offices in Sweden and Australia.

Allocate Software has experienced sustained growth for many years, with clients in the Europe, Australia, USA and other overseas territories. To support ambitious growth plans, the company is now establishing a software development centre in Skopje and is seeking a number of people to form a new Software Test Automation team.

The successful applicants will have the opportunity to work on market leading, modern .net application products used in the Healthcare market in Sweden, where initial training will be provided.

It is important that candidates have excellent written and verbal communication skills in English, are enthusiastic, thorough, self-motivated, collaborative team players, show respect for others and take responsibility for the quality and timeliness of their work. Experience of SCRUM is also useful.

Responsibilities

Accountable for ensuring that the automation tests produced by the team meet expectations, follow company test practices, are delivered on time and to a high quality.

Set up verification criteria and plan the QA work together with Test Leader in Stockholm.

Lead the QA work in the automation team and help the Test Leader to verify that automated test cases are well implemented, that company test practices are followed and quality goals are obtained.

Collaborate with the Test Leader/Product Owner in Stockholm to plan the implementation of test automation

Verify that the software works according to customer requirements and specifications.

Document manual test cases for regression testing.

Write specifications for automated regression tests

Implement automated tests.

Report found bugs in the bug tracking system.

Write test reports and recommendations for releases.

Follow up quality issues in released software and find areas for extending test coverage, product or process improvements.
