

Job & Internship for Serverless Project

About MCA

Founded in 2008, MCA is a company built upon the passion and dedication to make our client's projects and visions come to life by utilizing the latest technologies.

Our main clients are American, Danish, Swedish and Norwegian companies. Servicing the telecom, financial and law enforcement industries, MCA is involved in all phases of the development process – from inception, execution to maintenance. Our customers appreciate our one-stop-shop approach, as we provide them with front-end, back-end, mobile and server operations.

We offer

At MCA you will be challenged daily to produce the best solution possible, with stringent code review from both analyzer tools and your team. Compulsory daily peer reviews, fully tested code, and continuous delivery are what makes our developers code better. To master new technologies, we have weekly tutoring sessions where the teams rapidly gain knowledge and experience.

And it's not only work, we have parties every week with drinks, foosball, video games...

Your qualifications

We have a project that has clients globally and needs to scale very quickly. The project has non-functional requirements that it needs to withstand DDOS scale usage for the peak times which can last couple of minutes, and then not to have any traffic for days. As such you'll be part of the project which will implement this serverless implementation.

Additionally, it is a plus for the passionate developers that have general web frameworks experience (it's a benefit if you have Angular specific experience). Your primary task would be to develop new modules and components for the system. However, depending on your experience, you would be welcome to participate with decisions on both UX and the back end.

Interns and Junior Developers

We completely understand that it's not possible for you to be fully productive without an extensive working experience. For that reason, we have an immersive introductory method that gets all applicants into full gear within two weeks. We make sure that your team members depend on your work in their active project, thus making sure that you get productive as soon as possible.

Apply
