Full-stack Web Intern

ABOUT US:

PeopleWeek is a Human Resources and Collaboration Software Company based in Switzerland. Our product, the PeopleWeek patform, combines all the features of a corporate intranet, a digital collaboration workplace and HR tools across the employee lifecycle.

JOB PURPOSE:

The PeopleWeek platform, consists of many customizable modules that enable our clients to pick and choose modules based on their needs. As a Full-stack developer intern, you will learn to and help us design, build, improve and maintain these modules. Working at PeopleWeek is an exciting opportunity as we can offer interesting challenges and career growth potential as the company takes on more customers.

POSITION SUMMARY:

The internship program will last 3 months, during which you will be compensated.

PeopleWeek considers the internship program as one of the best ways to find talent. Upon completion of the internship, depending on your progress, you will potentially be offered an opportunity to continue your career at PeopleWeek as a full time employee.

Over the course of the internship, through practical tasks and projects you will be introduced to:
- The project and it's functionalities
- Project management and development life-cycle
- The technical stack (PHP, React.js, etc.)
- Development best practices and guidelines
- Writing and maintaining technical documentation

EXPERIENCE/SKILLS REQUIRED:

We want to hire developers who are passionate about the quality of their code and the user experience. We are a close-knit and entrepreneurial team so we also want to hear from people that are strong team players and creative problem-solvers.

In terms of technical skills we require:
- Good understanding of the different layers of a web stack
- Familiarity with GIT
- Previous familiarity with PHP,React.js or both (in any capacity, i.e. educational, personal projects, etc.).

Other skills that are not required but would be appreciated include:
- Using Linux and or Docker containers as a development environment
- Symfony / Laravel Framework experience
- MongoDB experience
- Writing automated tests
