About Me

Name: Farhan Shahid

Title: Technical Architect

Role and Responsibilities:

Allocate Software has a complex set of applications. This set comprises of both legacy and new cutting edge applications. My role is to design applications which are easy to scale and perform well and make sure the eco system of the Allocate application work as flawlessly as possible. I am responsible for bringing in new technologies to our eco system and new improved engineering practices within the organisation so we can benefit from the new developments.
